

EMOTIONAL INTELLIGENCE & LEARNING

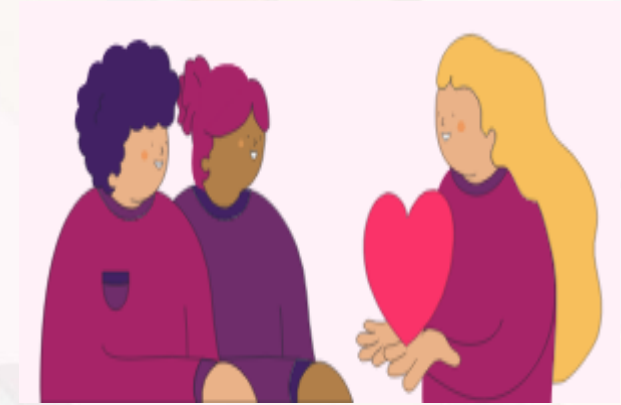

Lecture : 26

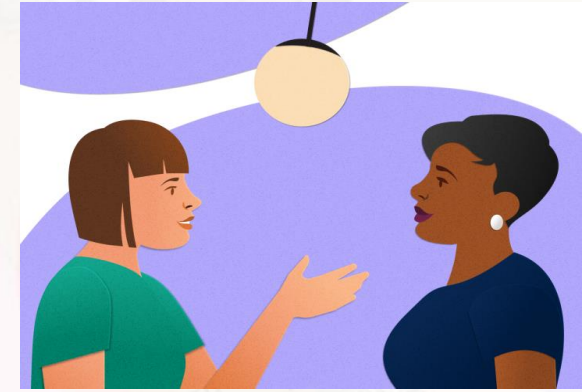

Prof. Atasi Mohanty
IIT Kharagpur

- **What Is Emotional Intelligence?(EI)**
- EI defined as 'the ability to identify and manage one's own emotions and the emotions of others'.
- **Psychologist Dr. Daniel Goleman** popularized the term in his 1995 book and describes **Emotional intelligence**,
- as encompassing both **personal competencies** (Self-awareness, Emotional regulation, Motivation), as well as how we handle **relationships with others** (Empathy and Social Skills).
- Emotional intelligence (**EQ**) is the quality that **enables us to understand and manage our own emotions, as well as those of others.**
- Emotional intelligence (EI) refers to a person's ability to understand and manage their emotions as well as recognize the feelings of others.
- Research shows it is **a useful tool for navigating work life, relationships, education, and mental and physical well-being.**

- Peter Salovey and John Mayer (1990,) were the first to develop a psychological theory of emotional intelligence(EQ) and introduced
- EQ as a:“set of skills hypothesized to contribute to the accurate appraisal and expression of emotion in oneself and others, the effective regulation of emotion in self and others, and the use of feelings to motivate, plan, and achieve in one’s life.”
- Emotional intelligence (EI) or Emotional Quotient (EQ) is a type of social intelligence that involves the ability to manage and monitor one’s own as well as other’s emotions, to discriminate among them, and to use the information to guide one’s thinking and actions (Salovey & Mayer, 1990).
- Daniel Goleman’s work in emotional intelligence has outlined five main areas of this intelligence, such as self-awareness, self-regulation, motivation, empathy, and social skills.
- These skills are linked to a range of benefits including academic achievement, decision-making abilities, and overall success in life.
- Experts even suggested that emotional intelligence/ EQ, is more important than IQ/academic intelligence.

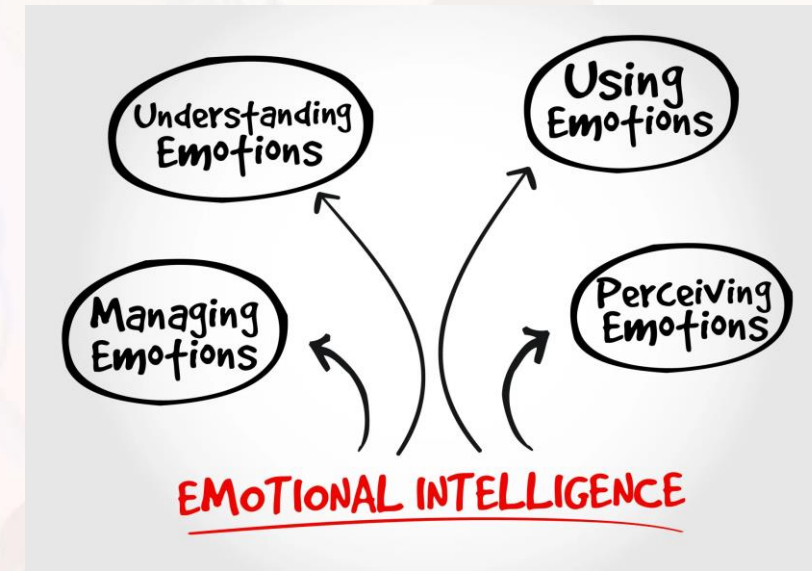

- **Components of emotional intelligence –**

- **1. Self-awareness**

- A **key part of EI** is a level of **understanding** and **self-awareness** of a person's own emotions.
- An individual with high EI is not only aware of what emotions they are feeling but **can put words to their feelings**(**Emotional Literacy**).
- They can also understand the **consequences of their emotions** and how they may change and shift over time.

- **2. Self-regulation**

- Once a person has achieved the first component, they can move on to **self-regulation**.
- An individual with a good awareness of their own emotions can **better manage the emotions** and **behaviors** that come along with them.
- This may involve **noticing a difficult emotion** and slowing down or **resisting any impulsive action** that may follow.

• 3. Motivation

- Motivation is the process that **stimulates** and **directs** someone **toward achieving their goals**.
- Motivation allows a person **to remain true to their goals** and **persevere**, even during challenging times.
- A person with low motivation may be discouraged easily by any obstacle and give up.
- A person with high motivation realizes that the reward of their **personal goals is worth the time** and **effort spent** getting there, even when they face obstacles.

• 4. Empathy

- Empathy refers to **how tuned to the emotions of others a person is**.
- Someone with high EI can accurately identify which emotions another person is feeling and can tell the difference between **genuine** and false **emotions**.
- A person may do this by noticing certain **facial expressions** or changes in another person's voice or **body language**.

• 5. Social skills

- A person with higher levels of EI may be better at **interacting appropriately with others** than a person with low levels of EI.
- EI can help a person **build relationships, communicate** with others, and **maintain friendships**.
- **Why emotional intelligence is important ?**
- Research has shown that **students with higher levels of EI are** generally **more happy, sociable**, and **self-confident**, as well as better at handling stress.
- Studies have also shown that **EI can help students develop social relationships** in school, which can **positively impact their academic performance**.
- **EI can be important** in many aspects of a person's life, such as-
 - **work-related outcomes**, overall job satisfaction
 - **psychological health** and **well-being**
 - physical health,
 - **social relationships**, teamwork & management skills

• Signs of Emotional Intelligence-

- An **ability to identify** and describe what people are **feeling**
- An **awareness of personal strengths** and limitations
- **Self-confidence** and **self-acceptance**
- The ability to **let go of mistakes**
- An ability to **accept** and **embrace change**
- A strong **sense of curiosity**, particularly about other people
- Feelings of **empathy** and **concern for others**
- Showing **sensitivity to the feelings of other** people
- **Accepting responsibility** for mistakes
- The **ability to manage emotions** in difficult situations

Emotional Intelligence Domains and Competencies

Self-awareness	Self-management	Social awareness	Relationship management
Emotional self-awareness	Emotional self-control	Empathy	Influence
	Adaptability		Coach and mentor
	Achievement orientation	Organizational awareness	Conflict management
	Positive outlook		Teamwork
			Inspirational leadership

Source: More Than Sound, LLC, 2017

Thank you!

EMOTIONAL INTELLIGENCE & LEARNING

Lecture : 27

Prof. Atasi Mohanty
IIT Kharagpur

➤ Advantages of Developing Emotional Intelligence-

- Being able to **accept criticism and responsibility**
- Being able to **move on after making a mistake**
- Being able to **say no when we need to**
- Being able to **share our feelings with others**
- Being able to **solve problems in ways that work for everyone**
- Having **empathy for other people**
- Having great **listening skills**
- Knowing **why we do the things we do**
- **Not being judgmental of others**

	Recognition	Regulation
Personal Competence	Self-Awareness • Self-confidence • Awareness of your emotional state • Recognizing how your behavior impacts others • Paying attention to how others influence your emotional state	Self-Management • Keeping disruptive emotions and impulses in check • Acting in congruence with your values • Handling change flexibly • Pursuing goals and opportunities despite obstacles and setbacks
Social Competence	Social Awareness • Picking up on the mood in the room • Caring what others are going through • Hearing what the other person is "really" saying	Relationship Management • Getting along well with others • Handling conflict effectively • Clearly expressing ideas/information • Using sensitivity to another person's feeling (empathy) to manage interactions successfully

- Researchers suggest -four different levels of emotional intelligence-
- **Perceiving emotions**: The first step in **understanding emotions** is to **perceive them accurately**.
- this might involve **understanding nonverbal signals** such as body language and facial expressions.
- **Reasoning with emotions**: using emotions to **promote thinking** and **cognitive activity**.
- **Emotions help prioritize what we pay attention** and react to; we respond emotionally to things that garner our attention.
- **Understanding emotions**: The emotions that we perceive can **carry a wide variety of meanings**.
- **Managing emotions**: The ability to **manage emotions effectively** is a crucial part of emotional intelligence and the highest level.
- **Regulating emotions** and **responding appropriately** as well as responding to the emotions of others are all important aspects of emotional management.

• Theoretical Models /Classification of EI

- A person's general intelligence consists of not only **cognitive intelligence** but also **emotional intelligence** and they **make up personality**.
- Just like cognitive intelligence, emotional intelligence is difficult to define.
- It is a complex concept that **includes** several dimensions (**abilities, characteristics, skills**) and **refers to** various fields of human nature (**cognitive potential, personality, behavior**) (Platsidou, 2004).

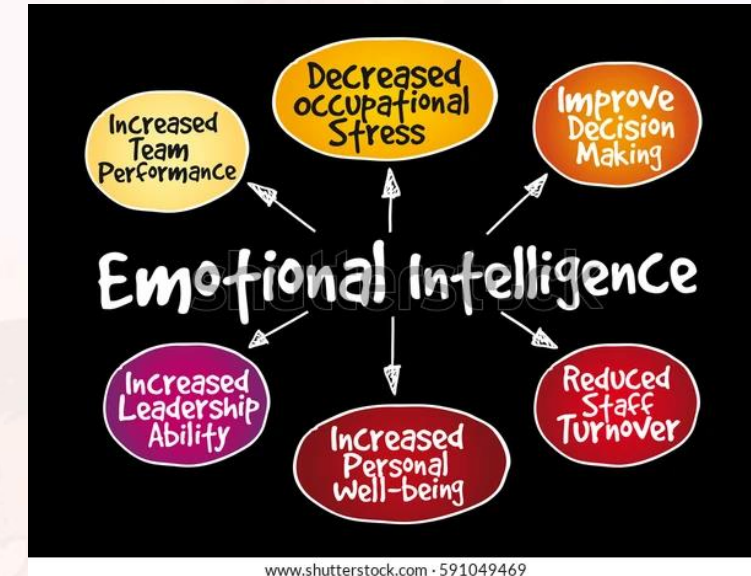

Chart 1: Goleman model: The Emotional Competence Framework. (Source: Goleman, 2001; Platsidou, 2004).

	SELF	OTHERS
	PERSONAL CAPACITY	SOCIAL ABILITY
RECOGNITION OF EMOTIONS	SELF CONFIDENCE Emotional self-awareness Accurate self-assessment Self-confidence	SOCIAL AWARENESS - Empathy - Service orientation -Organizational awareness
REGULATION OF EMOTIONS	MANAGING SELF Self-control Reliability Conscientiousness Adaptability Achievement Motivation Initiative	RELATIONSHIP MANAGEMENT Development of others Influence Contact Conflict management Leadership ability A catalyst for change Create links Teamwork & cooperation

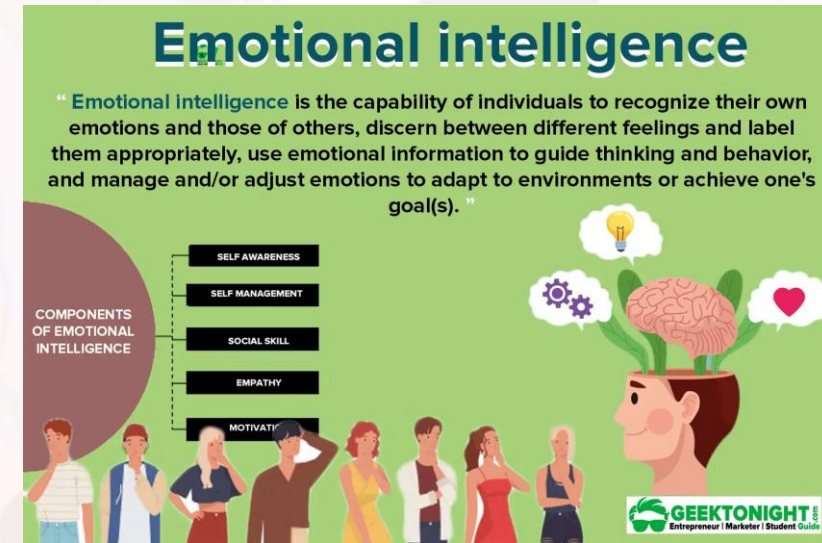

- **The Pyramid of Emotional Intelligence: THE NINE-LAYER MODEL**
- This model is based on the concepts of **interpersonal** and **intrapersonal** meanings of both constructs (**EI Ability model & Trait EI model**) into a more hierarchical structure(Gardner, 2000, 2011) .

Figure 1. The emotional intelligence pyramid (9-layer model).

- Emotional intelligence can play a large role when we are:
- Having difficult conversations without hurting others' feelings
- Managing our emotions when feeling stressed or overwhelmed
- Improving relationships with others
- Resolving conflict
- Coaching and motivating others
- Creating a collaborative environment
- Important Theories of EQ-
- **Mayer and Salovey's integrative emotional intelligence model**
- (1997)Comprises of four interconnected emotional abilities:
- Perception and expression of emotion
- Noticing our own emotions and picking up on the emotions of others as well as the ability to distinguish between discrete emotions.

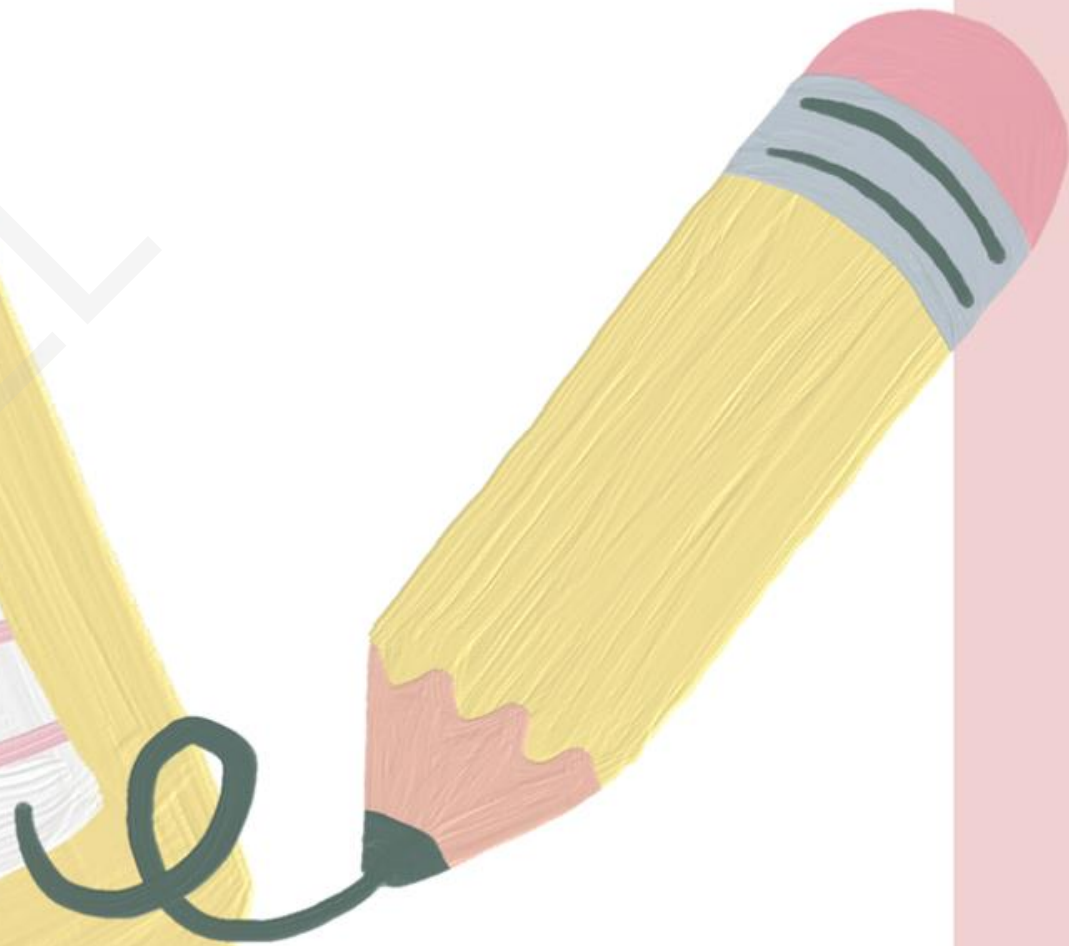

- Using emotion to facilitate thought
- How we incorporate emotions into our thinking processes and an understanding of when and how emotions can be helpful for reasoning processes.
- Understanding and analyzing emotions
- The capacity to decode emotions, make sense of their meaning, and understand how they relate to each other and change over time.
- Reflective regulation of emotion
- An openness to all emotions and the ability to regulate our own emotions and the emotions of others to facilitate growth and insight.
- **Bar-On's model of social and emotional intelligence**
- Bar-On's (2006) mixed model claims that EQ is a combination of competencies, skills, and "facilitators" that contribute to how people express themselves, respond to challenges in their environment, and connect with others.
- Bar-On suggests that 10 distinct components provide the scaffolding of emotionally and socially intelligent behaviors:

Thank
you!

EMOTIONAL INTELLIGENCE & LEARNING

Prof. Atasi Mohanty
IIT Kharagpur

Lecture : 28

- Self-regard
- Emotional awareness
- Assertiveness
- Empathy
- Interpersonal relationships
- Stress tolerance
- Impulse control
- Reality testing
- Flexibility
- Problem solving
- Self-actualization, independence, social responsibility, optimism, and happiness were originally considered to be components of EQ but were later reframed as “facilitators” of EQ (Bar-On).
- **Daniel Goleman’s theory of EQ-**

- Goleman (1995) offers a broad conceptualization of EQ abilities, including “self-control, zeal and persistence, and the ability to motivate oneself.”
- Goleman (2001) proposed that EQ provides a sign of an individual’s “potential” for developing emotional competencies (i.e., practical skills) that can help them thrive at work.
- His original theory mapped emotional intelligence into five key domains:
 - Knowing your emotions
 - Managing emotions
 - Motivating oneself
 - Recognizing emotions in others
 - Handling relationships
- Emotional intelligence is widely celebrated as a valuable commodity because it can predict life outcomes we care about, such as academic performance (MacCann et al., 2020), psychological adjustment (Fernandez-Berrocal et al., 2006), and workplace success (Lopes, Grewal, Kadis, Gall, & Salovey, 2006b).

➤ EI can be developed at any stage of life through self-effort & training-

- Strategies for improving one's Self-awareness:
 - Ask for **constructive feedback** from others.
 - Keep a **journal of one's thoughts** and feelings.
 - Practice **mindfulness** – try meditating.
 - Pay **careful attention** to one's thoughts and emotions.
 - **Pursue one's passions** and do what makes one happy.
 - **Learn new skills** and **set goals** for oneself.
 - **Reflect on** one's experiences and **be grateful**.
 - Use **positive self-talk** daily.
 - Work on **building a growth mindset**.
- Strategies for improving one's Self-regulation
 - Look at **challenges as opportunities**.
 - Be **mindful of thoughts** and **feelings**.
 - Build distress and **anxiety tolerance skills**.

emotional contagion

the transfer of emotional state from person to person through social networks, one's emotions triggering similar attitudes in others

- Work on **accepting reflections** and emotions.
- Find ways to **manage difficult emotions**.
- Practice **communication** and **social skills**.
- Recognize that one has a choice in **how one responds**.
- Use **cognitive reframing** to change emotional responses and **thought patterns**.
- **Strategies for improving Social Empathy**
- Be willing to **share emotions**.
- **Listen to** other people.
- Practice **meditation**.
- **Engage in a purpose** like a community project.
- Meet and **talk to new people**.
- Try **to imagine** yourself in someone else's place.

Emotional intelligence is the foundation for critical skills.

- Strategies for improving Social Skills:
- Ask **open-ended** questions.
- Find **icebreakers** that will help **start conversations**.
- Practice good **eye contact**.
- Practice **active listening** with the entire body.
- Notice other **people's social skills**.
- **Show interest in others** and ask them personal questions.
- **Watch one's body language** and that of others.
- **Using EI for Learning & Education-**
- **Self-Awareness and Emotion Management-**
- Creating a “**take a break**” in classroom can enable young students to step away to identify and explore their emotions.
- This **allows kids to step away before an outburst** or a situation where the child can no longer be kind occurs.

- Students can develop the **self-awareness needed** to create a safe and **productive classroom**.
- For Middle and High School students creating **opportunities for metacognition** is very beneficial not only for their education but also their wellbeing.
- A great example of this is having students create autobiographies. Cultivating opportunities for the connection of adolescent life to educational materials is powerful.
- **Empathy**
 - Create an atmosphere where empathy is celebrated.
 - Provide opportunities for real-life practice of empathy,
 - For example: sitting with someone new at lunch, interviewing classmates, or a classroom charity project.
 - **Random Acts of Kindness** groups are becoming more and more popular in schools.
 - With an adult supervising and **ensuring mindfulness** and **thoughtfulness**, it can be a fantastic way for kids to act on empathy.
 - Both the group and its recipients benefit from the **acts of kindness**.

- **Communication Skills**
- Teaching effective ways for students to communicate in the classroom is a great way to foster emotional intelligence.
- When kids have appropriate assertive abilities, their values are communicated, and their needs are met.
- **Cooperation**
- A fantastic example of fostering a culture of collaboration in education is a character checklist.
- For the classroom, create a chart of desired cooperative behavior. When a student behaves in one of these desired ways, a check would be placed in the chart.
- Setting weekly cooperation goals for the entire classroom by increasing these behaviors class-wide is something to celebrate!
- Examples-Listen for understanding, Sharing with others, Taking turns, Compromise during conflict, Volunteering to do your part, Being an encourager, Showing people they're needed, Being an insider.

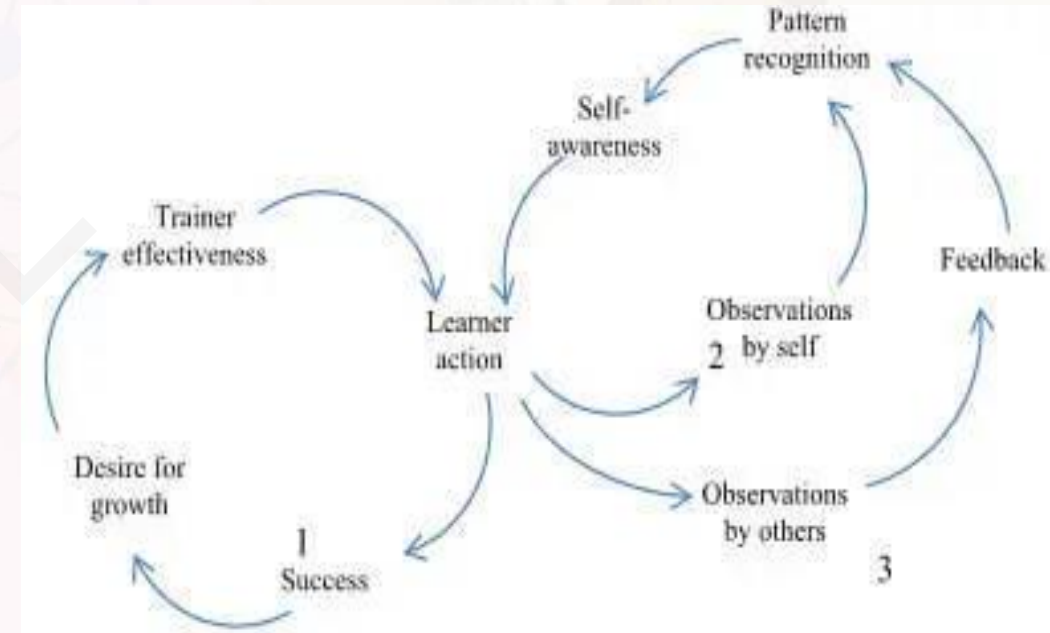

- **Conflict Resolution**
- Calling on emotional intelligence when in conflict is a difficult task for many students.
- **Improving communication skills** aids in improving conflict resolution, but having a construct for what resolutions look like will help kids know what is expected.
- **Example-allowing kids to write out the conflict, instead of verbalizing their sides. It allows kids to cool down and more accurately communicate their complaint and their needs.**
- **Self-Management**
- Self-management competencies involve having **a sense of achievement, displaying honesty, integrity** and, **trustworthiness** and being able to keep disruptive emotions under control.
- It also involves having **a sense of optimism**, being **adaptable** and flexible and recognizing and **seizing opportunities** as they arrive.
- Those who practice this competency **accept responsibility** and learn to choose their own emotional response.
- Self-management also involves learning **to re-frame stressful situations** into situations that are simply challenging.
- Tuning into those emotional triggers can help us better manage our emotions as well.

• Relationship Management

- Relationship management involves having a **sense of teamwork** and **collaboration**, being an inspirational leader and learning **how to resolve disagreements**.
- Those who are well versed in this competency know **how to** guide and **motivate others**, and use a wide range of tactics for **persuasion**.
- Relationship management also involves **being able to initiate** and **lead people** in a new direction and learning how to bolster other's abilities through feedback and guidance.
- **Know Yourself**: To be more aware of emotions and reactions.
- **Choose Yourself**: To be more intentional in responding.
- **Give Yourself**: To be more purposeful as we move forward.

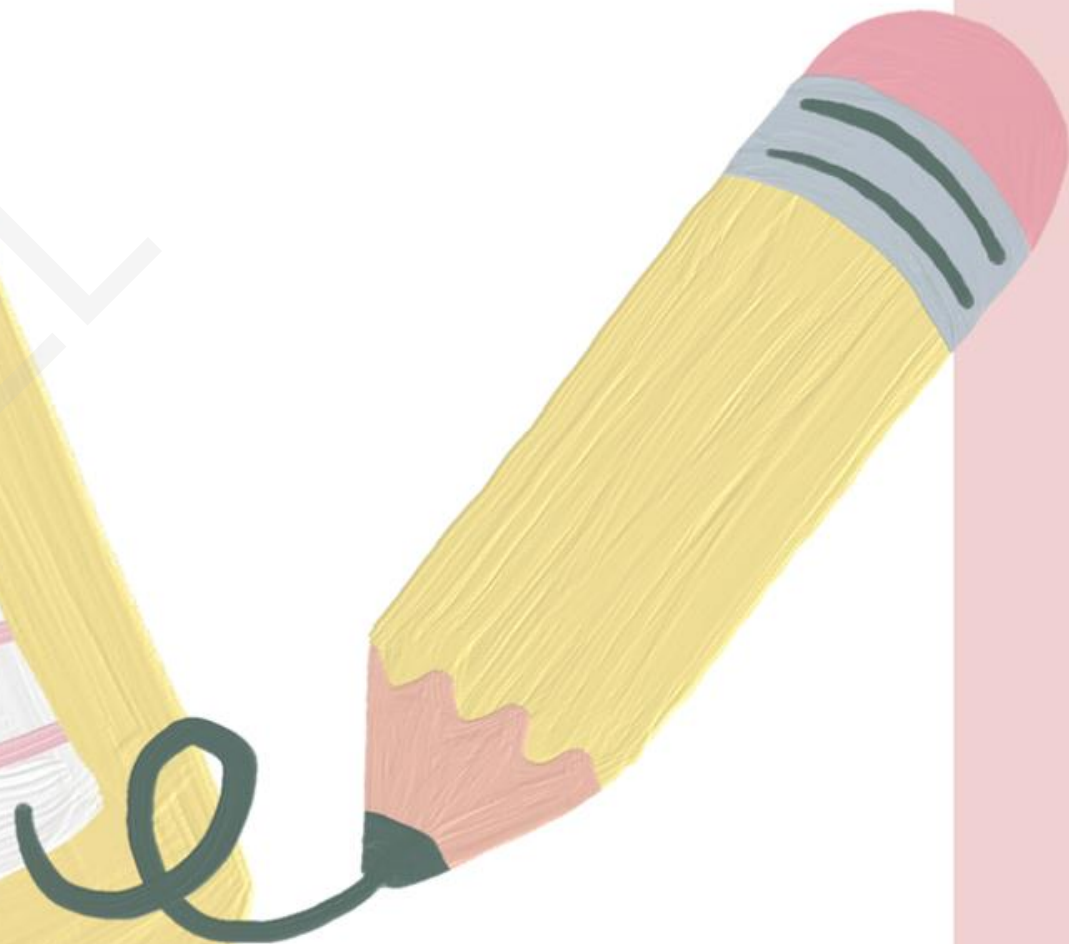

Emotional Intelligence Matrix

Capacities -- Competencies--Skills--Workplace Behaviors

SELF REFLECTION SELF AWARENESS	Emotional Self Awareness Accurate Self Assessment	• Takes responsibility for my own feelings, thoughts, wants, and actions • Can quickly and easily access and describe thoughts, wants, & feelings under stress • Aware of the level of intensity of my feelings with ability to separate past intensity from present • Able to observe myself in situations, particularly difficult or stressful situations and make choices in the moment • Able to access and use my feelings (anger, anxiety, fear, jealousy, sexual attraction, excitement, sadness, shame, joy, disappointment, etc.) in an appropriate manner in any context to facilitate learning and achieving goals • Able to observe myself, and use that information in the moment to change my course when appropriate • Able to focus on self & the other, moving between self and other with ease • Values, honors, and trusts my own experience
SELF REGULATION OR SELF SOOTHING	Self control Innovativeness Adaptability Resilience Trustworthiness Conscientiousness Leadership	• Deals with difficult issues in a straight forward, direct, non-blaming manner • Able to take difficult news or negative feedback, staying present and listening without blame or defending • Ability to monitor the intensity of responses in a manner that is appropriate for the context • Has the competence to use his/her own skills and those within the organization to lead innovative programs that may be challenged by others • Can soothe oneself and separate self from other when being dismissed, diminished, challenged, ignored etc., retaining the ability to let in information and make informed, non-reactive choices • Can manage oneself during times of real adversity, retaining the ability to make informed choices and serve as a positive balance for others • Fosters open communication and stay receptive to bad news as well as good • Takes responsibility for one's own actions • Can be counted on by others for honesty, trustworthiness in decisions, work, and communication • Able to soothe one's own emotions sufficiently to remain concerned about others and remain committed and conscientious in getting the job done • Can cope with the unexpected, chaos, and the predictable high anxiety that results within the organization • Able to maintain a "low anxious" presence under pressure which is a primary factor in helping others cope • Able to manage one's emotions sufficiently to allow for & invite different opinions in the midst of chaos
EMPATHY	Developing Others Political Awareness Conflict management Building team bonds Leadership ¹Competence list from Goleman, 1998	• Is attentive to emotional cues and listens well • Acknowledges and rewards people's strengths and accomplishments • Offers useful feedback and identifies people's need for future growth • Mentoring-gives timely coaching, and offers assignments that challenge and foster a person's ability • Understands the power structure within an organization and uses it well • Shows sensitivity and understanding of the other's perspective with valuing others' perceptions • Helps out based on understanding of other people's needs and feelings • Respect and relate well to people from varied backgrounds and different perspectives • Values and uses diversity • Understands diverse worldviews with sensitivity and appreciation for group differences • Challenges bias and intolerance • Values, respects, and supports individual team members and protects the groups boundaries to ensure getting the job done • Cultivates and maintains extensive information networks • Seeks out relationships that are mutually beneficial • Builds rapport and keep others in the loop • Makes and maintains personal friendships among work associates • Articulates and arouses enthusiasm for a shared vision and mission • Able to step forward to lead as needed, regardless of the position • Guides the performance of others while holding them accountable

Thank
you!

EMOTIONAL INTELLIGENCE & LEARNING

Prof. Atasi Mohanty
IIT Kharagpur

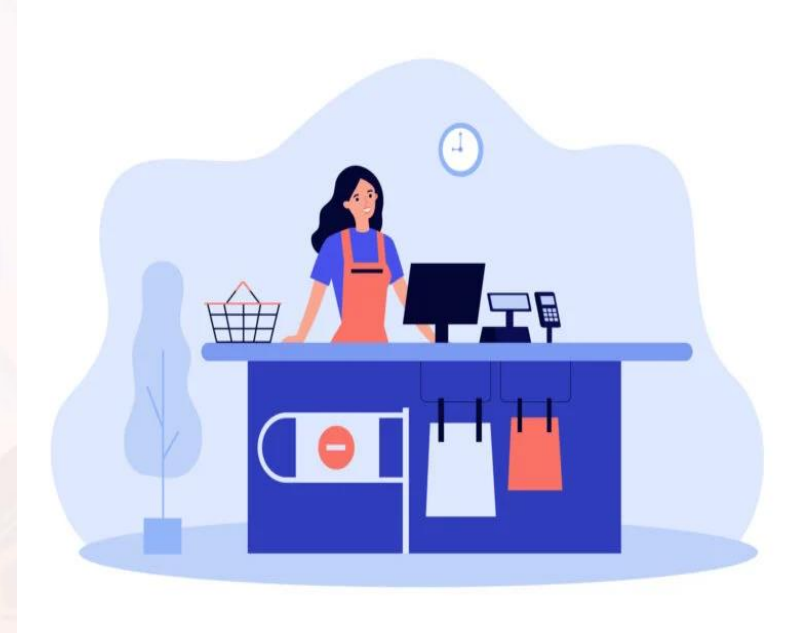

Lecture : 29

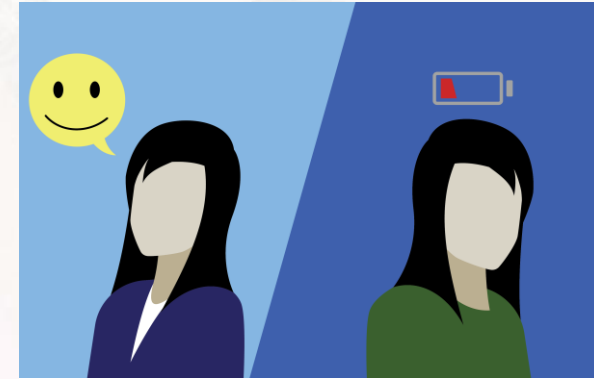

• Emotional Labor-

- Emotional labor was initially defined as the process by which workers are expected **to manage their feelings in accordance with organizationally defined rules and guidelines** (Hochschild, 1983).
- Emotional labor, is a term used for the **process of moving emotion management from the private realm to the public world of work** (Wharton, 2009).
- When someone engages in emotional labor, they can **regulate their emotions to ensure that others feel more comfortable**.
- Individuals manage their emotions by **actively shaping and directing their feelings**, recognizing that **social structure and institutions impose on these efforts**.
- The management of emotions is essentially a private act influenced by **cultural** and **social norms** about what is appropriate to feel and express but not directly regulated by others.
- **Example of flight attendants; these workers are often instructed to always be smiling, polite, and friendly to passengers, which Hochschild claims is emotional work.**

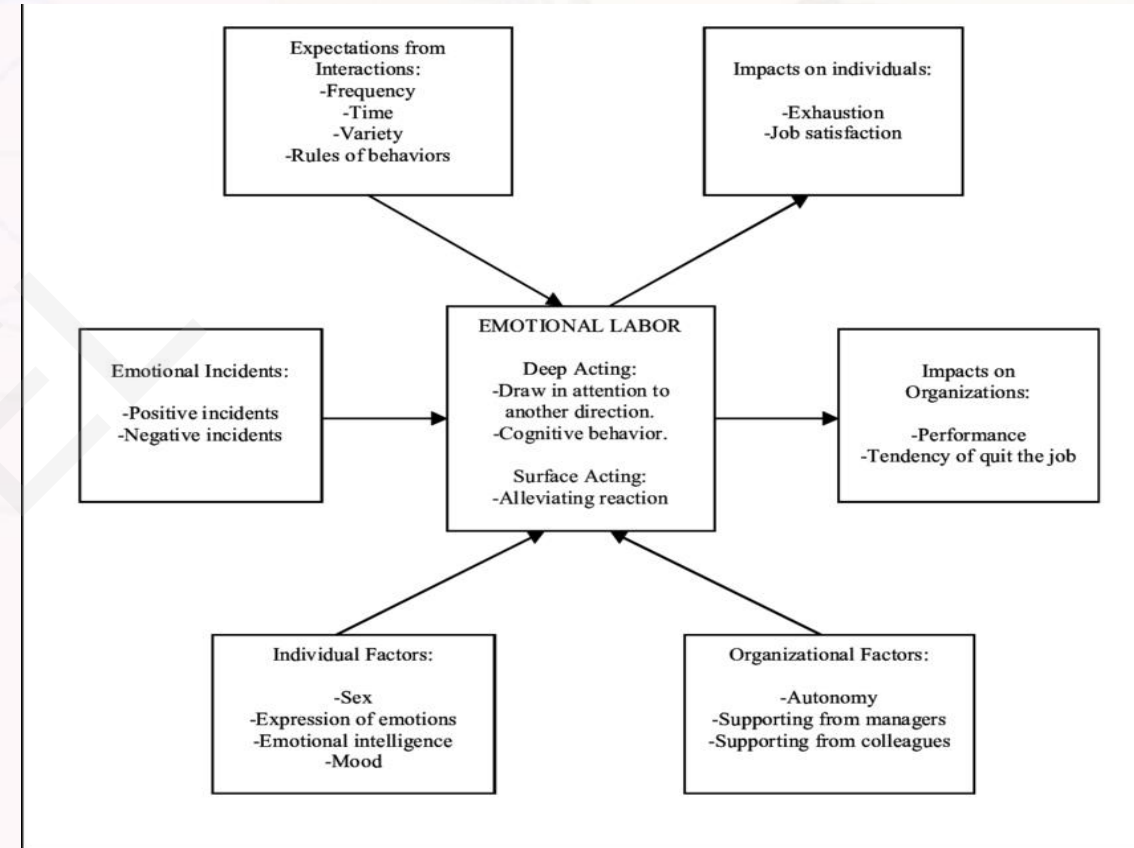

- According to Hochschild (1983), the ‘feeling rules’ are attempts by organizations to control employees’ inner lives or thoughts and feelings that are usually private and personal.
- Often, organizations commercialize employees’ feelings by requiring them to display emotions as part of their work duties.
- Hochschild suggested that jobs requiring more emotional labor are performed primarily by women.
- These jobs typically involve creating feelings of well-being or affirmation in others – responsibilities usually assigned to women.
- Some of these jobs include service work, hospitality, and healthcare, which are regarded as using the abilities women are thought to employ in the private sphere (Abbott et al., 2006).
- Any job that involves interactions with others is thought to require emotional labor to some degree, such as considering the workers’ power dynamics, status, and gender (Wharton, 2009).

- <https://www.bing.com/videos/search?q=Emotional+Labor&docid=603508467797606706&mid=9F5B28FCF78FEAD0855A9F5B28FCF78FEAD0855A&view=detail&FORM=VIRE>
- **Types Of Emotional Labor-**
- **Surface acting**
- Surface acting focuses on **public displays of emotional expression**.
- This is when workers change their outward emotional expressions but do not attempt to feel the emotions that they are displaying.
- Example-A common form of surface acting is when a service worker enhances or fakes a smile when interacting with a demanding customer or in a bad mood. While they may not feel like smiling, they will often do so to make the customer feel more comfortable or pleasant.
- **Deep acting**
- Emotional labor involving **deep acting** is an effort to truly feel the emotions **one is expected to display** .
- This is just like making **intentional effort to showcase empathetic emotional expressions**.
- Individuals attempt to change their privately felt emotions so that they can actually feel what they want to display.

- In the **domain of Learning** also a significant amount of **emotional labor** takes place during teaching.
- Teaching is a multitasking profession that consists of both **cognitive** and **emotional components**, with **teachers engaging in emotional labor** on a daily basis as an instrumental part of **achieving teaching goals** and **positive learning outcomes**.
- Researchers found that **surface acting displayed a positive relationship with emotional exhaustion**, **depersonalization**, and **psychological ill-health**, and a **negative relationship** with job satisfaction and organizational attachment, whereas **deep acting presented a positive association with emotional performance**.
- Review literature on **Teacher Burnout** shows that **Surface acting is associated with increasing levels of burnout**.

- Trends suggest that **emotional labor** is likely to become even more **intense in the teaching profession** as a result of **higher expectations of service** from both students and parents.
- Thus, it is assumed that the future picture is one where teachers **who experience more emotional labor are more likely to be more emotionally exhausted** and less satisfied with their work, and also more likely to depersonalize their students.
- **Deep acting** seems to positively affect teachers by increasing their **sense of personal accomplishment**.
- However, individuals' **emotional regulation strategies** seem to have the most **significant effect on how emotional labor affects** their **well-being**.
- Therefore, the effects of **emotional labor** at work may **depend on the enjoyment of the job**, how pleasant the workplace is, and an individual's **ability to regulate emotions in healthy ways**.

Emotional Labor

- **Emotional labor** is an employee's expression of organizationally desired emotions during interpersonal transactions at work.
- **Emotional dissonance** is the disparity when an employee has to express one emotion when actually feeling another.
- **Deep acting** is modifying one's true inner feelings based on display rules
- **Surface acting** is hiding one's inner feelings and forging emotional expressions in response to display rules. More stressful.

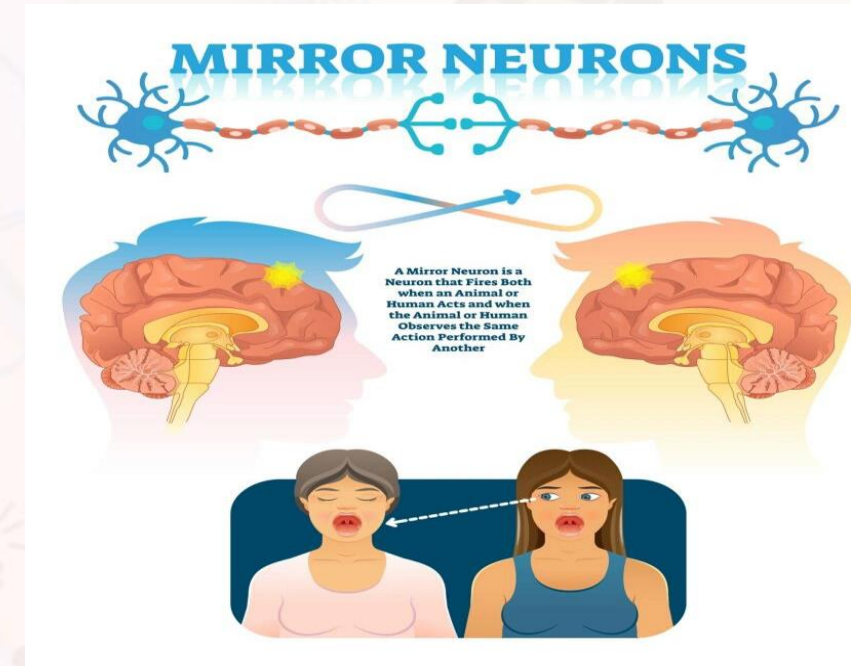

• Emotional Contagion

- Emotional contagion occurs when someone's emotions and related behaviors lead to similar emotions and behaviors in others.
- Awareness of emotional contagion is important for managing our own emotions and related actions, and to assure our wellbeing and that of others.
- Example-If someone approaches us with a smile, we have a natural tendency to smile back. If they approach us with a frown, the tendency is to frown too.
- Emotional contagion can be negative or positive.
- When people are stirred to anger and violent acts by a demagogue, that would be an example of negative emotional contagion.
- On the other hand, when a corporate leader frequently smiles, is generally kind and positive toward employees, and inspires positive feelings throughout the workforce, this would be an example of positive emotional contagion.

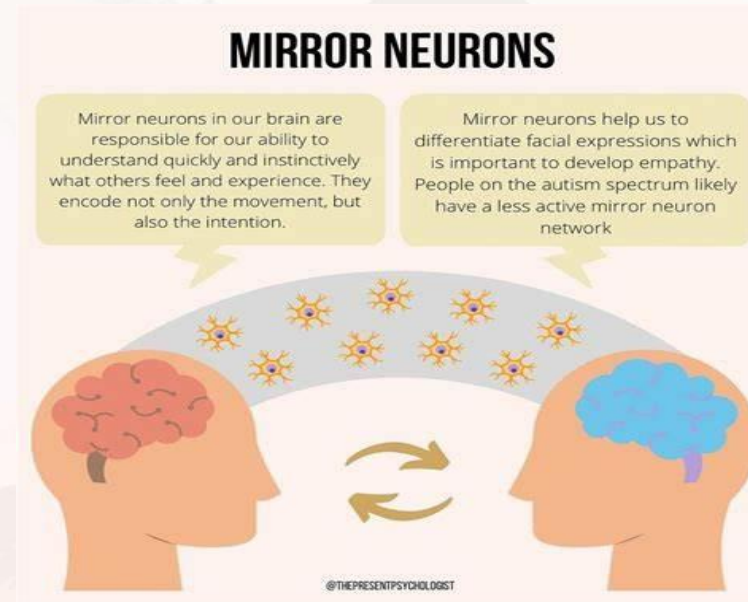

- Early research emphasized its basis in **person-to-person contact** and **mimicry**, including of others' **nonverbal cues** such as tone of voice, **gestures**, and **facial expressions** (Hatfield et al.1993).
- Research has found that such **mimicry comes naturally** to humans and other social creatures based partly on the existence of “**mirror neurons**” in our **cerebral cortex** (Bastiaansen et al. 2009).
- Italian neuroscientists showed that the **same neurons in monkey brains fired when a monkey grabbed an object as when they watched another monkey grab the object** (Ferrari & Rizzolatti, 2014).
- Similar **mirroring processes occur between humans**.
- These **specialized neurons** and their **networks** help explain **how humans can “mirror” each other, including our emotions**.
- **Mirroring** – and **spreading** – positive or negative emotions has real-world implications.

- Negative emotional contagion such as anger in the workplace led to more cognitive errors and workplace accidents.
- Positive emotional contagion led to fewer cognitive errors and accidents (Petitta et al.2019).
- Example-To be empathic, one needs to walk in another's shoes, feel their predicament or situation, but also keep the autonomy needed to relate to and potentially help that other person.
- There can be a fine line between empathy and emotional contagion.
- Thus, emotional states like empathy require some psychological distance on the part of the person experiencing them – a psychological distance that is often lacking in emotional contagion.
- Implications for Classrooms-
- Satisfied instructors mostly expect students to mirror their own behaviors in the classroom through being nonverbally responsive.

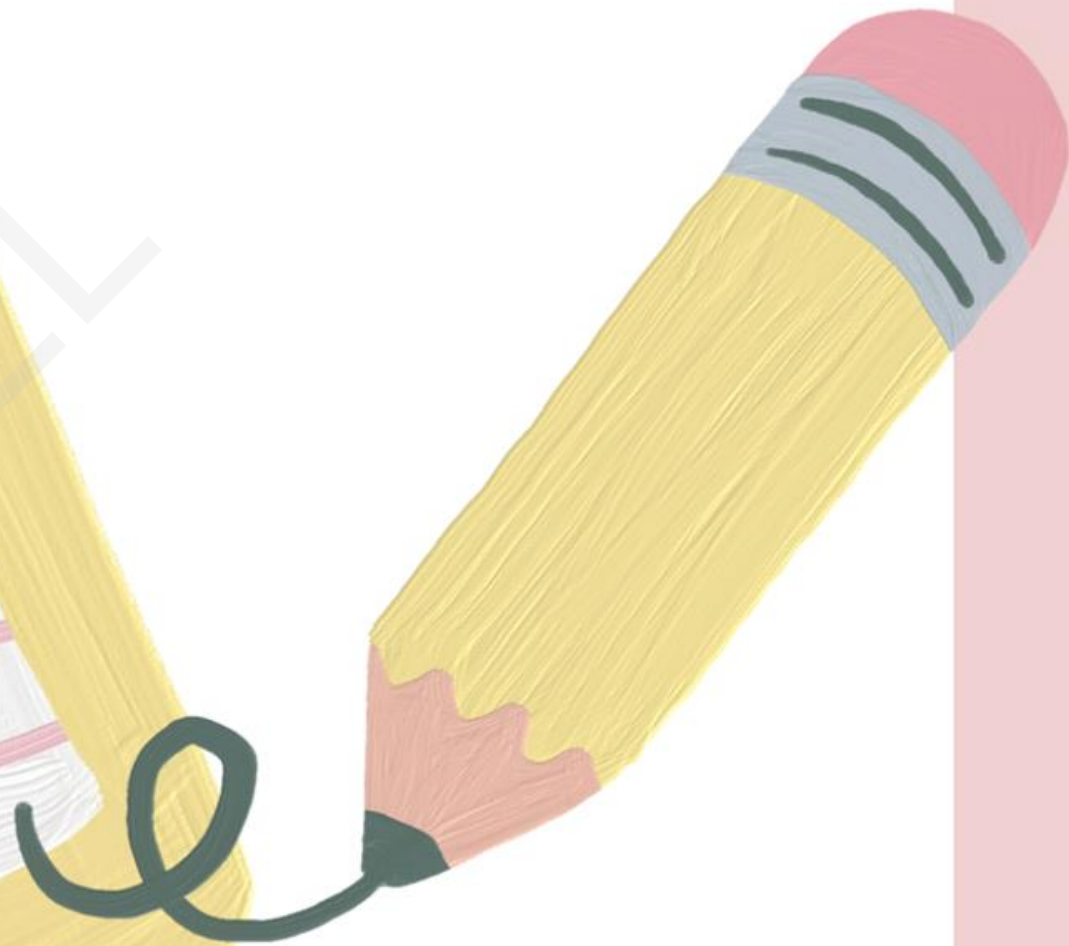

- Teachers' perceptions of their own confirmation behaviors most strongly predict their perceptions of how nonverbally responsive students are in class.
- Instructors who are more expressive will likely induce students to be more expressive, leading them to determine their students are being more nonverbally responsive.
- Expressive instructors will be more attuned to student interaction because they may subconsciously expect students to mirror their actions through nonverbal behaviors—they will look for it.
- Satisfied instructors view their students as satisfied and look for these feelings to be exposed via nonverbal response behaviors (Marian L. Houser, 2016).
- Exercising, volunteering and showing kindness, mindfulness meditation, and positive high-quality connections with others — even if virtual — can positively increase our mood.
- Feelings of hope have been found to be more important than feelings of fear in resilience to poor outcomes, and purposefully expressing optimism and gratitude, with the explicit goal and understanding of feeling better, also relate to long-term well-being.

Thank
you!

EMOTIONAL INTELLIGENCE & LEARNING

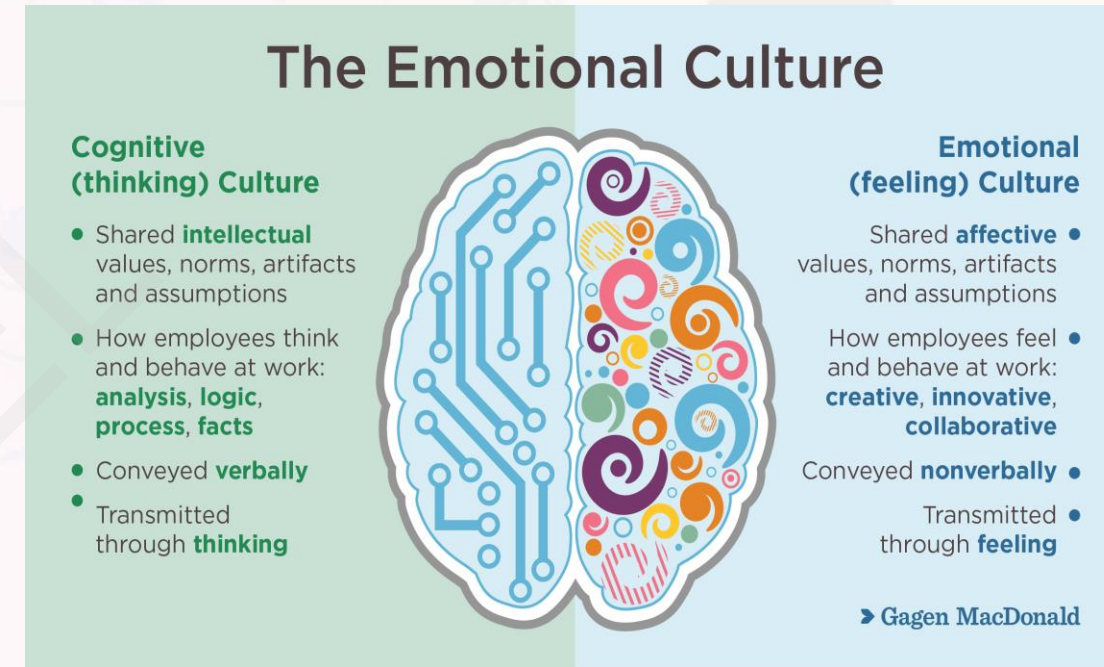

Prof. Atasi Mohanty
IIT Kharagpur

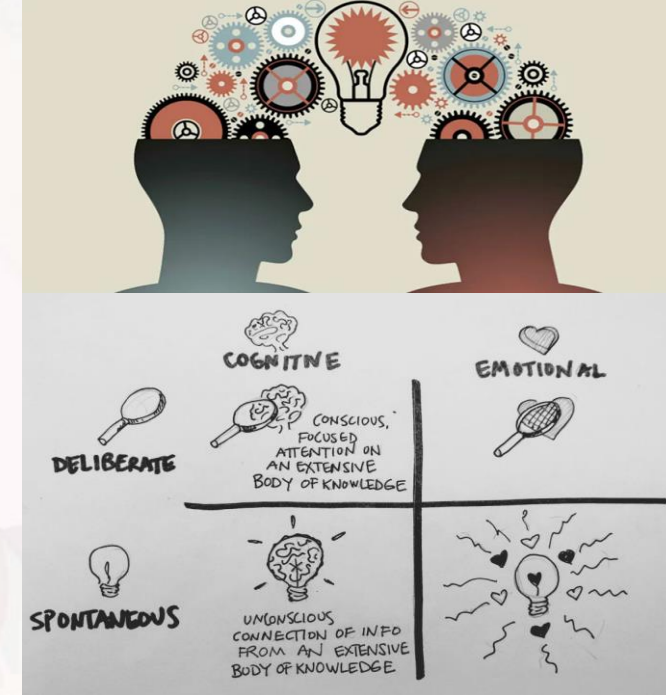

Lecture : 30

- **Emotional Creativity**
- Emotional creativity (EC) is a pattern of cognitive abilities and personality traits related to originality and appropriateness in emotional experience.
- It significantly pervades human creative performance, because it involves one's ability to connect with the reasons for and consequences of emotional responses at the preparation stage of the creative process as well as to experience and express novel emotions at the verification stage of the creative process.
- The higher EC has been found to be related to the increased involvement of students in creative leisure-time activities, e.g. creative writing, painting, composing music, dance improvisation, theatrical improvisation and do-it-yourself activities.

- EC is considered to be one of three main areas of general creativity, together with nonverbal and verbal creativity and creativity in problem solving.
- The important feature of EC is a divergence from the ordinary emotional experience, because it involves the cognitive abilities that enable cognition to diverge from common and generate novel emotional reactions.
- Emotionally creative abilities have been found to be closely related to cognitive abilities supporting innovative performance, i.e. idea generation, promotion and realization (Wang et al. 2015).
- Emotional creativity is related to personality traits (e.g., openness to experience), positive affect, and engagement in creative leisure activities.
- In applied settings, emotional creativity is related to innovative performance of employees as well as higher teaching efficacy.

- Emotional creativity is the **capacity to generate novel and effective emotional responses** to different situations.
- EC involves combining, transforming, and **expressing emotions** in original and adaptive ways.
- Emotional creativity can help us **cope with stress, enhance your relationships, and stimulate your imagination.**
- Emotional creativity can **increase our happiness by expanding your emotional repertoire** and enriching your emotional experiences.
- By creating new emotions we can discover new sources of **joy, meaning, and satisfaction.**
- By **transforming negative emotions**, we can **reduce their intensity and duration.**
- By **expressing emotions creatively**, we can share our feelings with others and **create positive feedback loops.**
- Meta-analysis revealed that women showed higher emotional creativity than men.

➤ Emotions can inspire creativity— Examples

- such as when a breakup gives rise to song lyrics, or when frustrations about existing consumer products lead an entrepreneur to create new ones—
- and emotions happen throughout the creative process, from anxiety about ambiguous problems to the joy of creating a new product or completing a performance.
- The **role of emotions** in the **creative process** might be the **most intuitively obvious in the case of the arts**.
- So, the arts might be the first place to look for examples of how emotional intelligence comes into play in creativity.
- Creativity or creative outcomes are not always abstract,
- The **application of creative work** and the ability to identify emotions and regulate or control the emotions to drive **creative performance validates emotional creativeness**,
- Example-Classic novels, literary pieces, poems, paintings, movies.

Thank
you!
